ProNet is ready to assist whether you experience damage resulting from fire, lightning strike, voltage surge, a cable system failure or vehicle electrical system and wiring failure. Our experts often work in tandem on-site investigations with fire investigators, mechanical engineers and material scientists to assist in the determination of the what, why, where and when an incident occurred.

ProNet's Electrical Engineers routinely review and analyze documentation regarding guides, codes, and references to augment the site investigation to reach a conclusive determination of the origin and cause of an event.
